

Marcelino Sandroni Dias

Senior Software Engineer

Fortaleza, CE, Brazil · Remote | +55 11 91446-1993 | marcelino.sandroni@gmail.com | linkedin.com/in/marcelinosandroni

Summary

15 years of corporate financial governance (2005–2020) plus 6 years of software engineering (2021–2026): 21 years of combined expertise. Senior Software Engineer and Tech Lead working end to end across backend, frontend, mobile and DevOps. I translate complex corporate financial rules into scalable web architectures and high-volume distributed systems — with measured results of R\$ 24 million/year, 100 million messages/day and 10x throughput gains. I work as a technical reference point: architecture, multidisciplinary team leadership, mentoring and AI-assisted automation to ship faster with clean, sustainable code.

Experience

Jan/2026 – Present Senior Software Engineer & Tech Lead, DGT Tecnologia, Remote Technical leadership in the restructuring and modernization of critical legacy systems for AI-powered public security monitoring, processing 100 million messages daily. Strategic role as the bridge between business and technology, with the autonomy to define architecture, processes and the technology stack, saving contracts worth R\$ 2M/month by delivering 100% accuracy across facial recognition and crime prevention systems.

- Rescued a R\$ 24M/year (R\$ 2M/month) contract in Florianópolis, lifting license-plate recognition accuracy from <60% to 100% and removing the cancellation risk.
- Multiplied throughput 10x on 100M messages/day by migrating MySQL to ClickHouse with Databricks ETL and Go and .NET microservices.
- Led 10 people (Dev, QA, BA, PO, PM) and cut development time 40% through a design system and shared libraries.

Jul/2024 – Dec/2025 Tech Lead & Strategic Consultant, Antlia, Remote Technical leadership in the modernization of critical legacy systems for BNPP Paribas, the bank's largest client, recreating the payments ecosystem and integrating with consolidated systems. Involved from planning through delivery, focusing on scalable distributed systems with Java Spring, an Angular microfrontend, Kafka messaging and complete DevOps (Kubernetes, Jenkins, Helm). Delivery of new applications for asset management with investment funds in the primary/wholesale market, integrating B3, US/European ETFs and large banks/brokers.

- Grew assets under management 45% in 1 year, with settlement moving from D+1 batch to real time and uptime from 95% to 100%.
- Created opportunities on the order of R\$ 50 million and automated manual processes, saving R\$ 500 thousand per year.
- Led 8 developers (3 principal) modernizing COBOL, VB and C# onto Java Spring and Angular, with hexagonal architecture, Kafka and 95%+ test coverage.

Mar/2022 – Nov/2022 Full Software Engineer & Tech Lead, Banco Itaú, Hybrid Technical leadership in the development of applications for internal management of wholesale market assets, controlling more than R\$ 100 billion in assets of large investors and clients. Control and investment ecosystem with intelligence and insights, B3 integration, national and international assets. Worked with a team of 9 people (6 developers, Tech Lead, PO, PM) on technical process improvements, code review, versioning, and mentoring of junior and mid-level developers in front end, back end and mobile.

- Designed the asset-management platform operating +R\$ 100 billion under custody, with B3 integration and a unified real-time view.
- Rescued a critical launch hit by infrastructure failure, fixing the messaging microservices in under 24h.
- Implemented automated testing across 3 layers (.NET, Angular, Flutter), raising code quality 8x with 80%+ coverage on a 9-person team.

Jun/2021 – Jan/2022 Full Software Engineer (Promoted in 3 months), Pollux Technologies, Remote Work across multiple clients focused on system modernization, cloud migration and resolution of critical problems. Promoted from Junior to Mid-level in just 3 months due to technical excellence and impact on delivery. Experience in health-care (electronic medical records and appointment forecasting), finance (AWS migration) and sports (critical delivery in 2 weeks). 30-50% reduction in infrastructure costs, performance improvements of up to 200%, and on-time delivery on 80% of projects (20% delivered early).

- Led an AWS public-cloud migration delivered in 3 months against a 6-month plan, with 2x performance and 30% cost reduction.
- Cut a client's monthly AWS spend 50% through invoice auditing, autoscaling and moving workloads to spot instances.
- Fixed messaging failures and data-integrity defects in healthcare, taking record accuracy to 100% and appointment predictability from 0% to 40%.

Jan/2005 – Dec/2020 Accounting Analyst & Manager, Accounting Consulting Firms, São Paulo Digital transformation and operational restructuring of companies through accounting process automation, strategic financial management and team leadership. Acted as the bridge between business and technology, implementing solutions that reduced operating costs by 83% and released working capital for strategic investments.

- Cut the accounting close from 30 days to 5 days (-83%), freeing 20+ people for higher-value work.
- Saved up to R\$ 1 million per year in taxes through advanced tax planning and strategic accounting reclassification.
- Allocated R\$ 2 million into high-yield investments (12–15% p.a.) and eliminated 95% of manual reconciliation errors.

Skills

Frontend & UI	React, Next.js (RSC, SSR), Angular, Flutter, React Native, Micro-frontends (Module Federation), Redux, Zustand, Tailwind CSS, Design System, Storybook
Backend Core	C# (.NET Core), Java (Spring Boot), Node.js (NestJS), TypeScript, Python, Go, Microservices, API Gateway, BFF, CQRS, Clean Arch, DDD, Apache Kafka, RabbitMQ (Topic Exchanges), Circuit Breaker, PostgreSQL, SQL Server, ClickHouse, Redis, OAuth 2.0 (PKCE), OIDC, JWT
DevOps & Cloud	AWS, Azure, GCP, K8s (Helm, HPA), Docker, IaC (Terraform), CI/CD, Jenkins, OpenTelemetry, Datadog, Grafana, TDD, Cypress, Playwright, K6, CORS, CSP
Artificial Intelligence	LLM Integration (OpenAI, Claude, Gemini), RAG, pgvector, Qdrant, TensorRT, LangChain, Autonomous Agents, AI Code Review

Education

Bachelor's in Computer Engineering – UNIVESP
2021–2025

In-depth focus on computer architecture, artificial intelligence and advanced data structures, consolidating the theoretical foundation for scalable software development.

Bachelor's in Accounting – Estácio
2017

Full command of corporate accounting, governance and financial analysis. The strategic foundation responsible for the expertise in building systems oriented to high return on investment.

Master of Computer Applications (Full Stack) – Labenu
2021

Intensive technical immersion in the modern web ecosystem, with rigorous application of Clean Code, automated testing and component architecture in real-world scenarios.

CSx50 (Computer Science) – Harvard University
2021

Robust grounding in the fundamentals of computer science, algorithms and discrete mathematics, reinforcing the algorithmic resolution of complex problems.
